Very Mysterious*

Sambucus nigra 'Black Lace'

'Black Lace' would have to be one of the most appropriate names ever given to a plant. The deeply coloured, rich burgundy-black foliage of this rounded shrub provides highly attractive colour and texture through the season. The delicate pinnate foliage is highly unusual for the species and added to this, the late spring show of pink and white flowers in large, flat umbels makes for a real 'show stopper'. Ideal for cool to temperate areas. Available in 20cm containers. Maybe a bit hard to find in nurseries as stocks are limited, but well worth looking out for!
